Use-Case Flow Specification

Use Case	Book Session
Goal	Allow a Learner Member to request and confirm a skill-exchange session with a Skill Mentor.
Actors	Learner Member (primary), Skill Mentor
Preconditions	Learner Member is logged in and has verified their account. The Skill Mentor has an active skill listing with at least one available time slot. The Learner Member has a time-credit balance greater than 0 (per FR-001).
Postconditions	A session request is created and linked to the selected skill listing and time slot. The Skill Mentor receives a notification of the pending request. The selected time slot is temporarily held (unavailable to other learners) until the mentor responds.
Main Success Scenario	1. Learner Member browses or searches skill listings and selects a skill they want to learn. 2. System displays the mentor's available time slots for that skill. 3. Learner Member selects a preferred time slot and submits a session request. 4. System checks the learner's time-credit balance («include» Manage Time Credits). 5. System confirms sufficient credit and creates the session request with status "Pending." 6. System notifies the Skill Mentor of the new request. 7. Skill Mentor reviews and accepts the request. 8. System changes session status to "Confirmed" and notifies the Learner Member. 9. Use case ends successfully.
Alternate Flows	4a. Insufficient Time Credits 4a1. System detects the learner's balance is insufficient for the session. 4a2. System blocks the booking and displays an "Insufficient credits" message. 4a3. Learner Member is redirected to browse skills they can teach to earn credits. 7a. Mentor Declines Request 7a1. Skill Mentor declines the session request. 7a2. System changes session status to "Declined" and releases the held time slot. 7a3. System notifies the Learner Member that the request was declined and no credits were deducted.
